

Advanced layer management (Ascender 32)

Standard configuration

Up to 4 true-seamless + 1 native background layers per screen

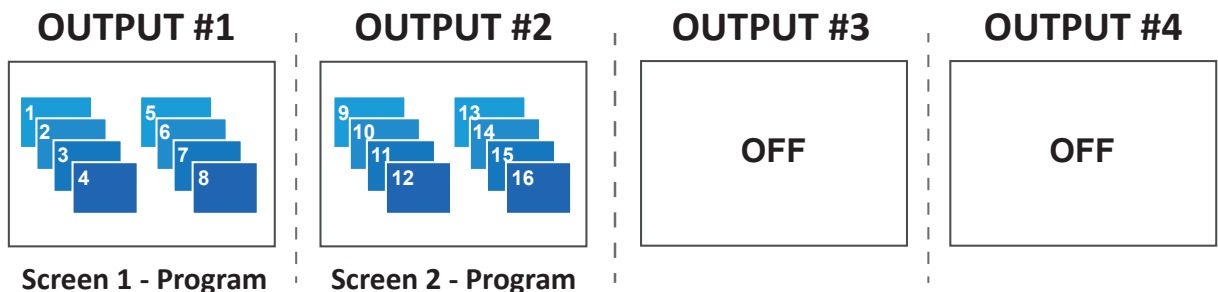

Use case #1

The 4 layers of output #4 can be assigned to another output of the device (on output #1 in this example).

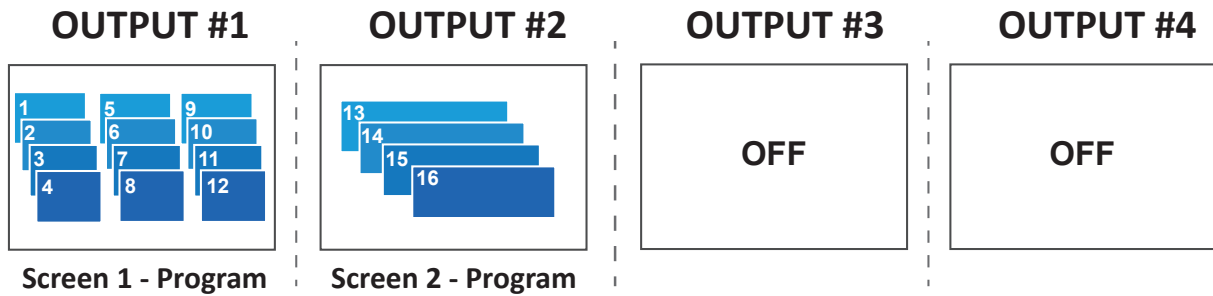

All 4 layers of an output can be added to only one other output. Additional layers may not be divided between several other outputs.

Use case #2

Advanced layer management (Ascender 32)

Use case #3

Use case #4

Use case #5

In Soft Edge Blend mode, the active outputs must have the same number of layers. Therefore the additional layers taken from outputs #3 & #4 will be spread to give you 8 total seamless layers of any size or position on your SEB screen.
